

Why it's so important

At Tyrecycle, we believe that everyone needs to be smarter about how they use the earth's limited resources.

Currently thousands of tonnes of scrap tyres are illegally dumped every year and not only cost millions of dollars annually but also produce severe health hazards and environmental damage.

The irresponsible management of waste tyres by some Australian tyre merchants contributes to extreme fire hazards, toxic pollution and the major risk of spreading Dengue Fever in Australia and Asia.

We must stop stockpiling end of life tyres, sending tyres to landfill and exporting whole baled tyres off-shore.

Your tyre retailer is actively working with Tyrecycle to deliver responsible management of waste tyres.

Tyrecycle continues to work with government and industry to increase awareness of the importance of tyre recycling and the promise of associated product development.

TO TYRE WASTE

Recycling your tyres for a better world

A RESOURCECO COMPANY

About us

Tyrecycle started in 1992 as a division of a major tyre manufacturer. But today we are Australia's leading recycler for all types of tyres, turning scrap tyres into rubber crumb and alternate fuel for use in innovative products.

What we do

Our goal is zero waste to landfill.

It's a very simple process. We collect tyres for processing at secure facilities across Australia in accordance with environmental regulations (including all EPA and Council approvals).

Used tyres and conveyor belts are the base material from which we produce repurposed products. We also produce Tyre Derived Fuel (TDF) and Tyre Derived Aggregate (TDA) as well as rubber granules, rubber crumb or powder and we recover almost 4,000 tonnes of steel a year from the tyres we recycle. We are committed to making sure our TDF is used responsibly so we're proud to claim that we're the only recycler in Australia that can guarantee full chain of custody for the TDF we sell.

Products created

Our contribution to the environment is a rubber recycling process that serves many markets. Tyrecycle is the largest supplier of recycled rubber to a number of domestic industries - Construction, Manufacturing, and Automotive. Tyrecycle products are often used to replace, enhance or extend the quality of the base virgin materials.

Products created from the recycled rubber include:

ATHLETICS TRACKS

BUILDING INSULATION

BRAKE PADS

CIVIL ENGINEERING

FUEL FOR ENERGY RECOVERY

PLAYGROUND SURFACES

MARINE NON-SLIP SURFACES

ROAD SURFACES

MATTING SURFACES

SPORTING SURFACES

NEW TYRE MANUFACTURE

TILE ADHESIVES
